**Date:** 23 April 2016

The security industry in Bahrain celebrates a remarkable milestone with the newly formed partnership between ABLOY and JANADA Electronics, bringing forth the next generation of high security systems, and introducing foolproof access control solutions, with four main lock and key products.

Top of the line, and world-class, ABLOY manufactures lock security systems that are unparalleled in scope and capability. The powerful partnership with JANADA Electronics as the authorized agent will see to the provision of holistic access control in the Kingdom, to all industries and sectors, including government and public services.

Since 2008, JANADA Electronics has set up shop with the mission to guarantee peace of mind, safety and security for communities and customers by offering integrated security solutions. JANADA provides the most innovative equipment and tactics, maximizing efficiency of cost and responding to the security needs of any situation in the home, workplace or public sphere. □

On Wednesday the 18<sup>th</sup> of May, an exclusive invite-only product and partnership seminar will be held at the Sheraton Hotel to unveil ABLOY's Protec2 Cliq key system, resilient cylinders and Super Weather Proof padlocks, as well as the EL-560 and EL-420 electromechanical and moto lock solutions, with networking opportunities, entertainment, and high-tech giveaways to complement.

"ABLOY secures millions of home and public buildings all over the world. Both the trust users place in us and our pioneering position are based on a long-term endeavor; continuously developing new and innovating locking solutions and door-opening technologies that facilitate smooth, and safe entry and exit." said Noury Bazido, ABLOY Regional Manager.

For both the trained and untrained eye, ABLOY products are robust and futuristic. They strike the perfect balance between providing pre-emptive and pre-set solutions whilst remaining highly scalable and adaptable to on-site needs.

The ABLOY Protec2 locking system facilitates access protocol sector-wide. It is used to operate multiple security solutions with a single master key. Possible key combinations go up to 1,97 billion, meaning a definitive solution for very specific

requirements.

The Protec2 Cliq electromechanical key sports a modular and upgradable structure, and is also 100% impervious to manipulation, foreign bodies and water, even at full immersion. The clock, calendar, and memory functions make the Protec2 Cliq the most sought after device to control access times, clear personnel, and maintain audit trail; storing up to 3,500 entries, and with a 10-year battery life.

ABLOY Super Weather Proof padlocks, both mechanical and electromechanical, are simply the toughest; catering to the protection of high security applications including water utilities, military use, the transportation and oil and gas sectors, as well as electric and telecommunications networks. The padlocks are enabled with high class encryption, programmable access rights and audit trail, and are built to withstand storms from the sea, burning sun, desert sand and dust, providing flawless protection against forcing, picking and vandalism.

The unique ABLOY cylinder mechanism is based on the use of rotating discs instead of traditional springs and pins, and has been a symbol of high security and superior performance. While the core of the cylinder mechanism remains the same, the outer housing can be changed to meet the requirements of a multitude of applications. ABLOY cylinders are designed to withstand extreme weather conditions and with a high level of protection against manipulation.

With the EL-460 and EL-560 series, connecting to access control systems has never been easier. This series of electromechanical and moto locks is automated and equipped to better electrical security, with auto-door-lock and door-open functions during outages and failures. The EL-460 comes with an electronic anti-tampering guard which notifies the system and fixes any attempts; whilst the EL-560 door handles are specifically designed for ease of use whilst ensuring maximum security and safety of personnel.
