

Anti-Oxidants

## GREEN TEA EXTRACT

### Supplement Facts:

- Green tea (*Camellia sinensis*) extract containing polyphenols

### Background:

Green tea contains high-potency detoxification properties that have been extensively studied and documented to contain extremely potent antioxidants. Moreover, a standard cup of green tea contains roughly 100 mg of polyphenols and has antioxidant capacities that twice exceed polyphenol content found in other readily available medicinal herbs and plants. **Green Tea Extract** by **Forze Della Natura™** containing a 99% green tea extract is standardized to provide high-potency polyphenols that are more easily absorbed into the bloodstream than polyphenols found in your average cup of green tea. At least, 60-90% of polyphenols contained in our Green Tea Extract are absorbed by the body and provide an extremely potent protective shield against free radical attacks.

### Key Features:

- Provides nutritional defense against free radicals;
- Contains high-potency detoxification properties;
- Improves mood and increases youthful appearance;
- Promotes immune system health;
- Facilitates Mental Clarity and Stability.
