

Forze della Natura™

Amino Acids

L-Carnitine

Supplement Facts:

- L-Carnitine

Background:

A major cause of aging is a decrease in the energy-producing components of the cell, resulting in reduced cellular metabolic activity and the accumulation of cellular debris. L-carnitine by **Forze Della Natura™** helps to maintain cellular energy metabolism by assisting in the transport of fatty acids through the cell membrane and into the mitochondria within the cell, where fatty acids are oxidized to produce the cellular energy called ATP. This energy boost in cellular function helps to provide a quicker recovery and less muscle fatigue after and during exercise. It also benefits brain, heart and central nervous system functions.

Key Features:

- Naturally Boosts Energy Level Production;
- Promotes Weight-Loss and Fatty Acid Metabolism;
- Increases Endurance and Recovery After Exercise;
- Promotes a Normal and Healthy Heart Muscle and Nervous System Function.
